1 Artifact Map

The non-hardware artifact includes source code, analytic-simulation results, bounded simulator probes, claim ledgers, and verification reports. The primary entry points are `reports/PACK_VERIFICATION.md`, `reports/claim_ledger.csv`, and `reports/final_artifact_manifest.json`.

2 Evidence Boundary

All current results are analytic-simulation or bounded-probe evidence. Hardware noise floor, camera-verifier agreement, reset reliability, and physical held-out modification results are pending.

3 Reproduction Commands

```
make smoke
make test
make reproduce-minimal
make reproduce-main-figures
make paper
make package-artifacts
```
